

CA2k 2k DCI Compliant Portable Cinema Kit For rental and events

The CA2k is a complete, boxed DCI compliant Digital cinema projection system in a box. Suitable for quick set up and stand - alone operation, the system comes complete with a 3D ready projector, a DCI server with typically 3TB storage, a Dolby or equivalent 5.1 or 7.1 D cinema sounds processor and an alternative content processor suitable to interface with external non-DCI inputs such as satellites, Blu Ray players, PCs and other digital and analogue sources. Tying the whole system together is a wireless network and portable PC.

The unit ships in three parts, making it extremely portable and a (hard) one or (easy) two person shift. The parts are

- DCI 2k projector, typically a Barco DP2k10SX or Christie CP2kS, suitable for screen of up to 12m and 20m respectively
- A main rack, shown here with the projector sitting on it, complete with server, network, sound processor and all cabling etc
- A universal dolly, wheeled and suitable for moving both the projector and server rack

Within the rack are patch field inputs and outputs, a universal touch screen, mains distribution and self contained cabling allowing the unit to be used almost anywhere with the projector either attached or remotely.

The unit is perfect for anywhere wanting DCI or high end HD 2D or 3D projection for short to medium term hire. It is also perfect for non-cinema operations for event organizers wanting the highest quality HD images from any source. Typical applications include

- Film festivals
- One-off screenings in non DCI venues
- Back up or emergency use in cinemas
- Events
- Large outdoor screenings
- Effects and advertising

Options include 3D, amplifiers, speakers and indoor outdoor screens. Available fully staffed and delivered or for dry hire. Call for long and short term rates

OUTLINE SPECIFICATIONS
